

*Quality means
peace of mind.*

HR[®] *Solutions. Delivered*
Pharmaceuticals, Inc.

Since 1931, the HR[®] Brand has delivered customer value and product innovation. At times, our innovations have been revolutionary, such as developing the Trojan[®] condom; while at other times, we have simply extended the line of existing products. Each of our innovations has the goal of further developing our customers TRUST by enhancing healthcare and improving patient safety. Enhancing healthcare and patient safety are at the heart of what we do and we know it is the foundation of our customers' success. The OneShot[™] helps our customers achieve that success.

Contamination Control

Infection control boards constantly struggle to implement quality control measures to reduce cross contamination. Your board and patients deserve peace of mind, knowing their physician is using the superior HR® OneShot™ Solution.

Single Use

Contaminated reusable products spawn thousands of infections each year. Although reusable products can be cheaper, they often expose patients to increased risk of infection. The OneShot™ delivers the products you use daily, in a single-use form, to maximize patient safety.

Compliance

Accreditation organizations, such as the Joint Commission, HFAP and DNV, are becoming more stringent in addressing the risk patients are exposed to as a result of facility material control measures. Single use products, when available, can mitigate this concern and lead to positive patient outcomes.

Federal Regulations

The FDA has begun to advise using Low Unit of Measure (LUM) products. If a single-use product is not available, using a small, partial quantity of a multiple-use product and throwing away the remainder is not an efficient use of resources.

Waste

The OneShot™ line comes in many different volumes. Find the size your departments need and eliminate waste.

Inventory Control

All OneShot™ products are barcoded to the point of care. These barcodes ensure that optimal inventory-control measures can be taken and evaluated by Materials Management, assuring you of accurate, real-time inventory data.

Affordable Care Act

With the recent changes in reimbursement, facilities are enhancing quality-control measures to receive the highest reimbursements. Implementing the OneShot™ line can improve your quality control by giving physicians an easy way to mitigate risk.

Patient Safety

We all have a responsibility to make sure patients receive the highest level of care. The HR® OneShot™ helps to meet this objective by minimizing patient risk.

Real Cost Savings

Implementing the OneShot™ Solution goes far beyond a traditional cost-savings initiative. Evaluating solely the delivered price per ounce of two comparable products can offer a traditional cost-savings analysis. But, the real cost includes the additional expense of readmissions, infections, increased risk and exposure, reimbursement rate deductions, etc...

Evaluating products based on a "real" cost is truly optimizing materials management!

Facilities that have implemented the OneShot™ Solution achieve improved patient care one single use at a time. Are you ready to make a small change to realize a big difference?

Currently available for:

HR® Lubricating Jelly

HR® Ultrasound Jelly
